

JNCIA-WX Certification Training

The JNCIA-WX Certification training course This three-day, instructor-led course focuses on installation, configuration, troubleshooting, and operational analysis of the WAN Acceleration (WX) and WAN Acceleration Cache (WXC) platforms.

The course covers an overview of WX platform concepts and then moves on to initial installation using Quick Setup. The WebView graphical user interface (GUI) is used to configure and manage the main features of the WX platform: compression (using Molecular Sequence Reduction and Network Sequence Caching), Packet Flow Acceleration (TCP application acceleration), Application Flow Acceleration (which speeds up CIFS, Microsoft Exchange, and HTTP traffic), and implementation of quality-of-service (QoS) policies.

In labs, students configure and test all these features. The WX Framework's exceptional monitoring and reporting capabilities are featured throughout, and the course ends with an introduction to the WX Central Management System (CMS) software.

These features are configured and tested in labs by the students. By the end of this course, students will understand the implementation of the WX product to support common environments.

Specific topics include:

- Completing Initial Configuration
- Confirming Service Tunnel Status
- Route Learning
- Configuring Compression and Caching
- Quality of Service
- WX Platform QoS Settings
- Configuring Packet Flow Acceleration
- Application Flow Acceleration
- Exchange and MAPI
- Changing the Registration Server
- SNMP and DNS Support
- Network Tools
- Exporting Data and Generating Support Files
- Troubleshooting
- Monitoring and Reporting

Prerequisites:

Attendees of this Juniper Networks technical education course are expected to have a basic understanding of the following topic areas:

- Knowledge of TCP/IP, routing, and switching.
- Knowledge of WAN protocols such as MPLS and Frame Relay is helpful.

Duration: 3 days

Cost: \$2,295 This class can also be delivered at the customer premise at a rate commensurate with the number of students in attendance.

All Juniper courses use authorized Juniper Networks® course materials.

Dynamic WorldWide Training Consultants provides training and training services in the areas of network security, network planning and phased implementation. We provide a convenient and cost-effective method for technical support teams to quickly update their networking skills with up-to-date, accurate information.

DWWTC is a Juniper Networks Authorized Education Center (**JNAEC**) providing the highest quality Education Services of Juniper Security and IDP products, and now the Juniper M/T, E and J-Series products. Our Program Managers can help you schedule events that meet your needs for your technical support and sales teams on any of the Juniper product technical and certification programs - **WorldWide**.
